

RD T-Series V2 Type-2 ESC,60A

Wiring Diagram

(For Drone OEMs & DGCA UAS Integration)

Wire Gauge (AWG)

1) Power Input: 14 AWG

2) Motor Output Leads: 14 AWG

Note: The ESC uses a single Dupont 2.54mm 3-pin female connector to carry all control and **telemetry output** signals. In this configuration, the **Signal input** (white) wire is on one end, Telemetry (red) is in the middle, and Ground (black) is on the opposite end. This eliminates the need for soldering and ensures broad compatibility with standard 2.54mm header interfaces.
